Remove duplicate lines in a file

high level:

    for each line in file:
        hash (line)

    print (hash)

```
filename = input("Enter path to file") or ". / dup.txt"
my_file = open (filename)
hash_table = {}
for line in my_file:
        hash_table [line] = 1
for key in hash_table. keys():
        print (key)
```
